## ENVIRONMENTAL PRACTICES

Claridge is committed to protecting and preserving our natural environment through a variety of ongoing programs.

Many components of our board products contain post-industrial recycled materials, including the steel, aluminum, core and backing material – the main components of our markerboards. Approximately 85% of the wood material in Claridge Duracore is considered post-industrial. The remaining percentage is generated from residual sawmill operations.

Claridge Cork is made from the bark of cork oak trees without damaging the tree itself – making it both rapidly renewable and recyclable. Claridge carton and crate materials are composed of post-industrial and recycled materials. We eliminate tons of material from the landfill waste stream through in-house recycling programs.

Claridge strives to minimize indoor environmental contaminants and supports the green building movement. No formaldehyde is used in the manufacturing of Claridge Duracore. We also offer an alternative adhesive option that meets volatile organic compound (VOC) standards set by the Leadership in Energy and Environmental Design (LEED) Green Building Rating System™.
